Immunization for Dental Health Care Personnel

Immunizations are important component of infection prevention plan. Immunization considerably decreases the risk of transmission and susceptibility of DHCP to these diseases. It is the responsibility of faculty staff members, students and auxiliaries to obtain recommended immunization prior to entry in the dental college.

All dental personnel (students, staff, and faculty) who provide patient care or handle items contaminated with patient's blood or body fluids are to be immunized against Influenza, Tetanus/Diphtheria, Measles/Mumps/ Rubella chickenpox (varicella), and Polio. All Dental Health Care Personnel (DHCP) at risk must also be immunized against Hepatitis B virus.

All the employee must have their recent immunization document.

It is mandatory for an employ prior to enrolment/employment to provide updated immunization status.

Recommended Vaccinations:

Hepatitis B: 3 doses of vaccines over the period of 6 months. Antibody titers are checked after 5 years to determine need for booster.

Tetanus: After every 10 years. Booster at the day of injury or booster within 5 years of injury.
